-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Armitage 4,781,386 in view of Urban 2,993,697 (newly cited).

Armitage shows a broadhead including a ferrule 20 having a locking portion 52; blades having notches that mate with the locking portion; and a locking nut 36 at the rear of the ferrule to hold the blades in place. The nut appears to have a roughened cylindrical surface, so it may be turned by hand, but may be difficult to grip with a tool. One would recognize that it may be desirable to grip the nut with a tool in case extra turning force is needed. For example, Urban shows that a nut 70 on a broadhead may include flat surfaces to facilitate gripping with a tool. One would have found it obvious to use this nut with the broadhead of Armitage in case extra turning force from a tool is needed.

Claims 15 & 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Armitage in view of Newnam 5,636,845 (newly cited).

The blades and ferrule shown by Armitage are apparently of conventional materials such as steel; such material is subject to wear and corrosion which may diminish the target penetrating ability of the arrow head. Newnam discloses that an arrow head may be provided with a coating of self-lubricating material such as TEFLON brand fluoropolymer (column 3, lines 64-67). This would reduce corrosion and friction and increase penetrating ability of the arrow head. It would have been obvious to provide the arrow head of Armitage (blades and/or ferrule) with this self-lubricating coating.
